Talk to Frank before ordering to make sure it will work with the pumping system that we are going to use . Frank also knows of another place locally that may be able to get us a flow meter. Get the location and give it to me and I will go by there next week. May be better to get local in case we have an issue with it.
thanks

Subject: Water Flow meter

Gary/Chris,

Here's a flow meter with threaded schedule 80 pvc that can handle well over 50 gpm. He can do tax exempt. Total cost is 421.60. Can be shipped to the Site in 1 day from factory.

This is needed at the Site vs ERRs renting a flow meter for approx. \$670/day or week. So, one day's/week's use would pay for this, and it would be something we can use at other sites as well.

Still checking on if I can get a calibration certificate. If we can (and we need one), that could be an additional cost. Will send a follow up email regarding this.

Thanks

Adam
